WHAT THIS VERIFIES

The catalogue SEO audit renders its summary and the issues it found across the seeded catalogue, using only local product data — no external SEO service is called.

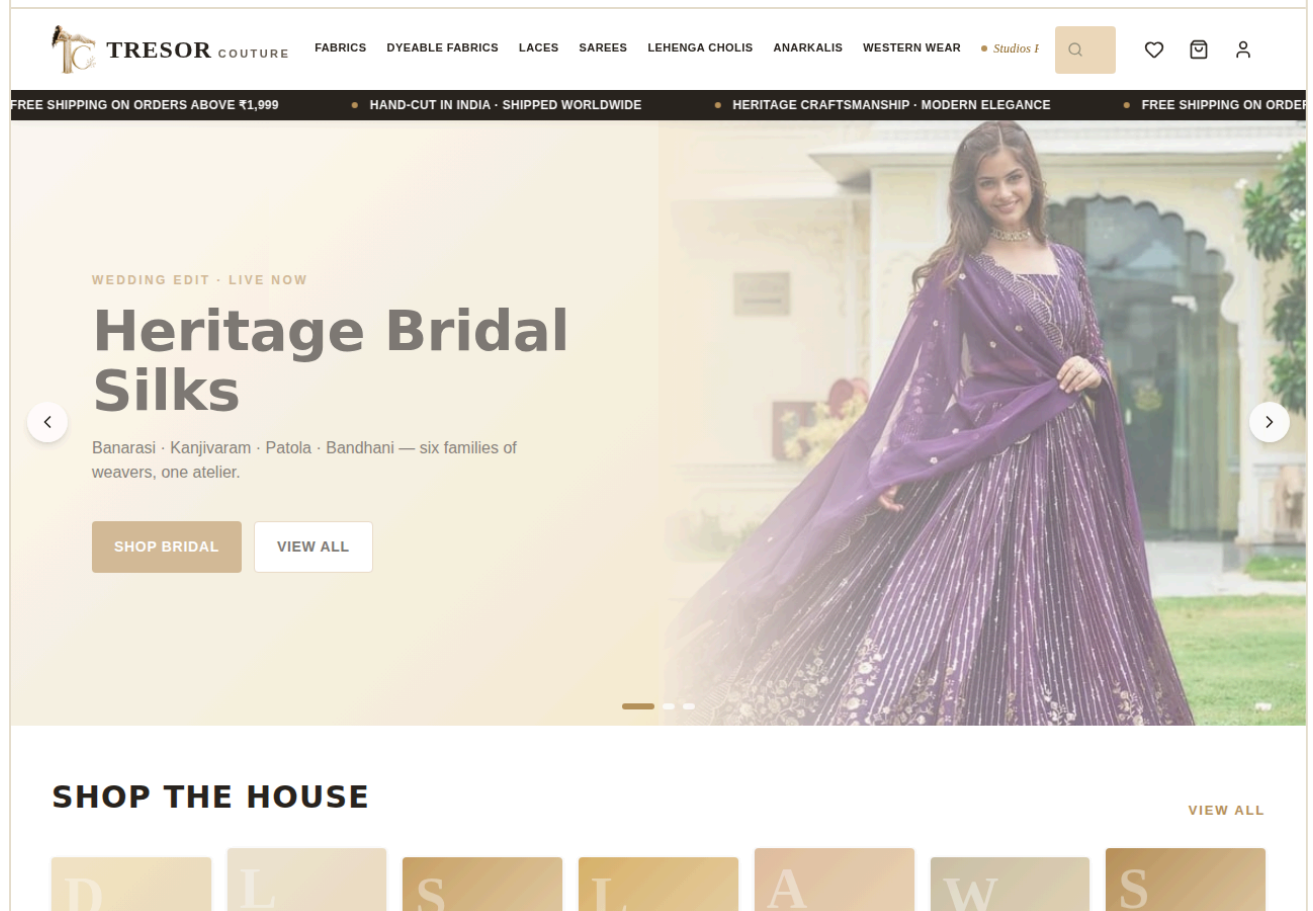

REPRODUCE MANUALLY

1. Start the Firebase emulators and seed the full dataset (see README → Tests).
2. Build with `VITE_USE_EMULATORS=1` and serve on `http://127.0.0.1:4173`.
3. Sign in as `admin@test.local / Test1234!` (this account carries the admin custom claim).
4. Navigate to `#/admin/seo`.
5. Confirm the section heading and its primary controls render against seeded data.

STEPS (2)

1 Signed in as the atelier admin

The admin custom claim gates both the UI and the Firestore rules.

Landmark heading matches /catalogue seo/i.

Audits your own product data — no external service, no API key, no request budget. It finds the things that stop a product ranking or stop a shopper trusting it. Backlinks and competitor rankings are deliberately not here: that data cannot be self-hosted.

CRITICAL 2 products

Near-identical pages get collapsed in search results, so these products compete with each other and usually only one survives. It also reads as boilerplate to a shopper comparing two colourways.

Fix: Write one or two distinct sentences per product — the colour, the occasion, what the work is.

WARNING 7 products

There is too little text for a search engine to understand what the page is about, and too little for a shopper to justify a five-figure purchase.

Fix: Describe the work, the fabric, the drape and the occasion.

NOTICE 1 product

Sold-out pages that stay live for a long time lose ranking and waste crawl budget. Short term this is fine — the storefront badges them and sorts them last.

Fix: Restock, or retire the product if it is not coming back.
