WHAT THIS VERIFIES

The bulk-email composer relays admin-authored HTML to customer inboxes. The server refuses HTML containing script tags, javascript: URLs, inline event handlers, iframes, objects or embeds — so a compromised admin session cannot turn the mailing list into a phishing vector — while leaving ordinary marketing HTML untouched.

REPRODUCE MANUALLY

1. Sign in as an admin and open `#/admin/bulk-email`.
2. Compose a campaign whose HTML body contains a `<script>` tag, or a link with a `javascript: URL`.
3. Attempt to send: the request is rejected with `html_content_forbidden` and nothing is dispatched.
4. Replace it with ordinary marketing HTML (headings, links, images, tables): the content is accepted.
5. The same rule is unit-exercised by this test against nine attack payloads and three legitimate ones.
