

Legal disclosure · GSTIN gating

Tresor Couture · automated end-to-end test report

Area	Compliance
Test id	legal-disclosure-gating
Result	PASSED
Duration	0.0s
Executed	2026-08-14T09:15:23.373Z
Environment	Firebase Emulator Suite (Auth + Firestore) loading the production firestore.rules

WHAT THIS VERIFIES

Every customer-facing surface that can show a GSTIN — tax invoice, Terms, Contact page, storefront footer and the order-confirmation email — resolves it through the same gate, so a placeholder or malformed registration is omitted rather than printed.

REPRODUCE MANUALLY

1. Leave VITE_GSTIN unset (or set to the sample 36ABCDE1234F1Z5) and build.
2. Open an order invoice, `#/terms`, `#/contact` and the storefront footer: no GSTIN appears anywhere.
3. Set VITE_GSTIN to the real registration and rebuild.
4. The same four surfaces now show it, and the order-confirmation email carries it in its footer.

STEPS (5)

1 ✓ Sample GSTIN rejected

The shipped placeholder is treated as "not configured".

No screenshot — data assertion.

2 ✓ Empty, truncated and malformed values rejected

Includes the application reference number, which is easy to confuse with the registration itself.

No screenshot — data assertion.

3 ✓ A well-formed registration is accepted

The gate blocks placeholders, not real values.

No screenshot — data assertion.

4 ✓ Order email applies the same rule, and normalises case

`api/_lib/sellerLegal.ts` mirrors the client gate because `api/` compiles as standalone ESM.

No screenshot — data assertion.

5 ✓ **PAN placeholder rejected too**

Same reasoning: a fabricated PAN on an invoice is worse than none.

No screenshot — data assertion.
